Herculaneum, Missouri 63048

Dear Ms. Guzman:

RE: Residential Property at 213 Clinton, Herculaneum, Missouri

Dear Ms. Guzman:

This letter is to inform you that the United States Environmental Protection Agency (EPA) has established a residential soil action level of 400 parts per million for the Herculaneum Lead Smelter Site. The residential property located at 213 Clinton, Herculaneum, Missouri, has had all lead-contaminated yard soil that exceeded the site action level replaced to a depth of one foot. This work was completed on or about February 8, 2002. Interior cleaning of the dwelling at this residence was also performed recently and was completed on February 14, 2002. These actions were performed by certified lead-abatement contractors with EPA representatives overseeing the work. The cleanup actions were conducted in accordance with site-specific protocols that have been established by EPA. Post cleanup sampling of the dwelling interior was performed to insure that cleanup was complete. Occupants will be notified when results are available that confirm that the interior cleanup criteria has been met.

Please call me at 913-551-7755 if you have any questions concerning this matter.

Sincerely,

Bruce A. Morrison
